

Limitorque MX and QX Valve Actuators

Next-generation electronic actuators

Experience In Motion

Flowserve Limitorque Actuation Systems

Limitorque is an operating unit of Flowserve, a \$4 billion-plus company strongly focused on automation and support of the valve industry. Introduced in 1929, Limitorque has 80-plus years of experience in actuating every type of valve.

- Proven history as an industry leader and innovator
- 240,000-square-foot manufacturing and assembly facility in Lynchburg, VA, USA
- Global quick response centers in Houston, TX; Suzhou, China; and Mezzago, Italy
- Global service network of factory-trained technicians provides excellent after-sales support
- Complete range of products:
 - Multi-turn products up to 38,350 lb.ft/52 K Nm of torque and 1.7 million pounds/7650 kN of thrust
 - Quarter-turn products up to 614,000 ft.lb./832,477 Nm of torque
- Low maintenance, high reliability, durability and long-life actuators that translate into low cost of ownership
- Complete and competitive valve control solutions for all industries

State-of-the-art Actuation

The Flowserve Limitorque QX quarter-turn and MX multi-turn electronic valve actuators lead the industry in quality, safety and ease of use.

The MX included innovations that were market firsts when introduced, and the latest MX and QX models have improved on these while adding to the list:

- Non-intrusive design employs selection knobs with solid-state Hall-effect devices instead of reed switches that can fail with age and vibration
- Non-contacting absolute encoders for accurate position sensing.
- Batteries are not required for the absolute encoder to retain position data in the event of loss of main power thus eliminating the need for costly battery maintenance programs or the potential loss of equipment availability due to battery failure
- The absolute encoder includes redundant position sensors and comparator logic for increased reliability and safety
- Limigard technology uses internal logic to compare with external commands to prevent actuator malfunctions using a Fail/No Action philosophy
- Graphical display for access to operational data in 11 languages
- Optional Bluetooth® wireless connectivity

The QX and MX provide the user with predictable, reliable and safe operation for years to come, in the most rigorous applications and extreme environments.

MX and QX Network Communications

The MX/QX provide a comprehensive network option portfolio to the User. Network solutions are improved with the addition of HART to complement Modbus, Foundation Fieldbus H1, DeviceNet, Profibus DP_V1 and Profibus PA. MX/QX provide the User with predictable, reliable and safe operation for years to come, in applications that are subject to the most rigorous requirements and environmental extremes.

DDC (Distributed Digital Control) Modbus Communication

DDC is Flowserve Limitorque's digital communication control system that provides the ability to control and monitor up to 250 actuators over a single twisted-pair cable. The communication network employs Modbus protocol on an RS-485 network and is redundant. The field unit also communicates all actuator status and alarm diagnostic messages over the same communication network.

DDC Network

- Single-ended loop (consult factory)
- Modbus protocol
- High speed – up to 19.2 k baud

Foundation Fieldbus communication with Device Type Manager (DTM) technology

The MX and QX can be fitted with Foundation Fieldbus protocol that complies with the IEC 61158-2 Fieldbus H1 standard. The field unit device is able to support several topologies such as point-to-point, bus with spurs, daisy chain, tree or a combination of these.

Profibus DP V1 communication with DTM

The MX and QX can be fitted with Profibus DP_V1 protocol field units that comply with EN50170 Fieldbus Standard for RS-485 communications. The device supports several topologies such as point-to-point, bus with spurs, daisy chain, tree or a combination of these. The DTM supports Flowserve's ValveSight diagnostic engine.

Profibus PA communication with DTM

A Profibus PA protocol is available and complies with EN50170 Fieldbus Standard and Fieldbus physical layer per IEC 61158-2 for communications. The device supports several topologies such as point-to-point, bus with spurs, daisy chain, tree or a combination of these.

HART

HART (Highway Addressable Remote Transducer) is a digital communication protocol where field units may be connected by a standard instrumentation twisted-pair cable to form a HART communication system network. The HART network employs a bi-directional communication protocol, operating at 1200 bits/sec, that provides data access between intelligent actuators and host control/monitoring systems. In addition to a digital signal, the network simultaneously provides a 4-20 mA analog signal that is proportional to the field unit's primary measured value. The HART protocol is defined as an open network standard, and Limitorque's actuators are certified for use by the HCF, HART Communication Foundation.

DeviceNet

DeviceNet is a low-cost communications protocol which permits up to 64 nodes (devices) to be installed over a single network and is based upon CAN (Controller Area Network), a broadcast protocol developed for the automotive industry. DeviceNet™ protocol is defined as an open network standard, and Limitorque's device is certified for use by the ODVA, Open Device Standard Association.

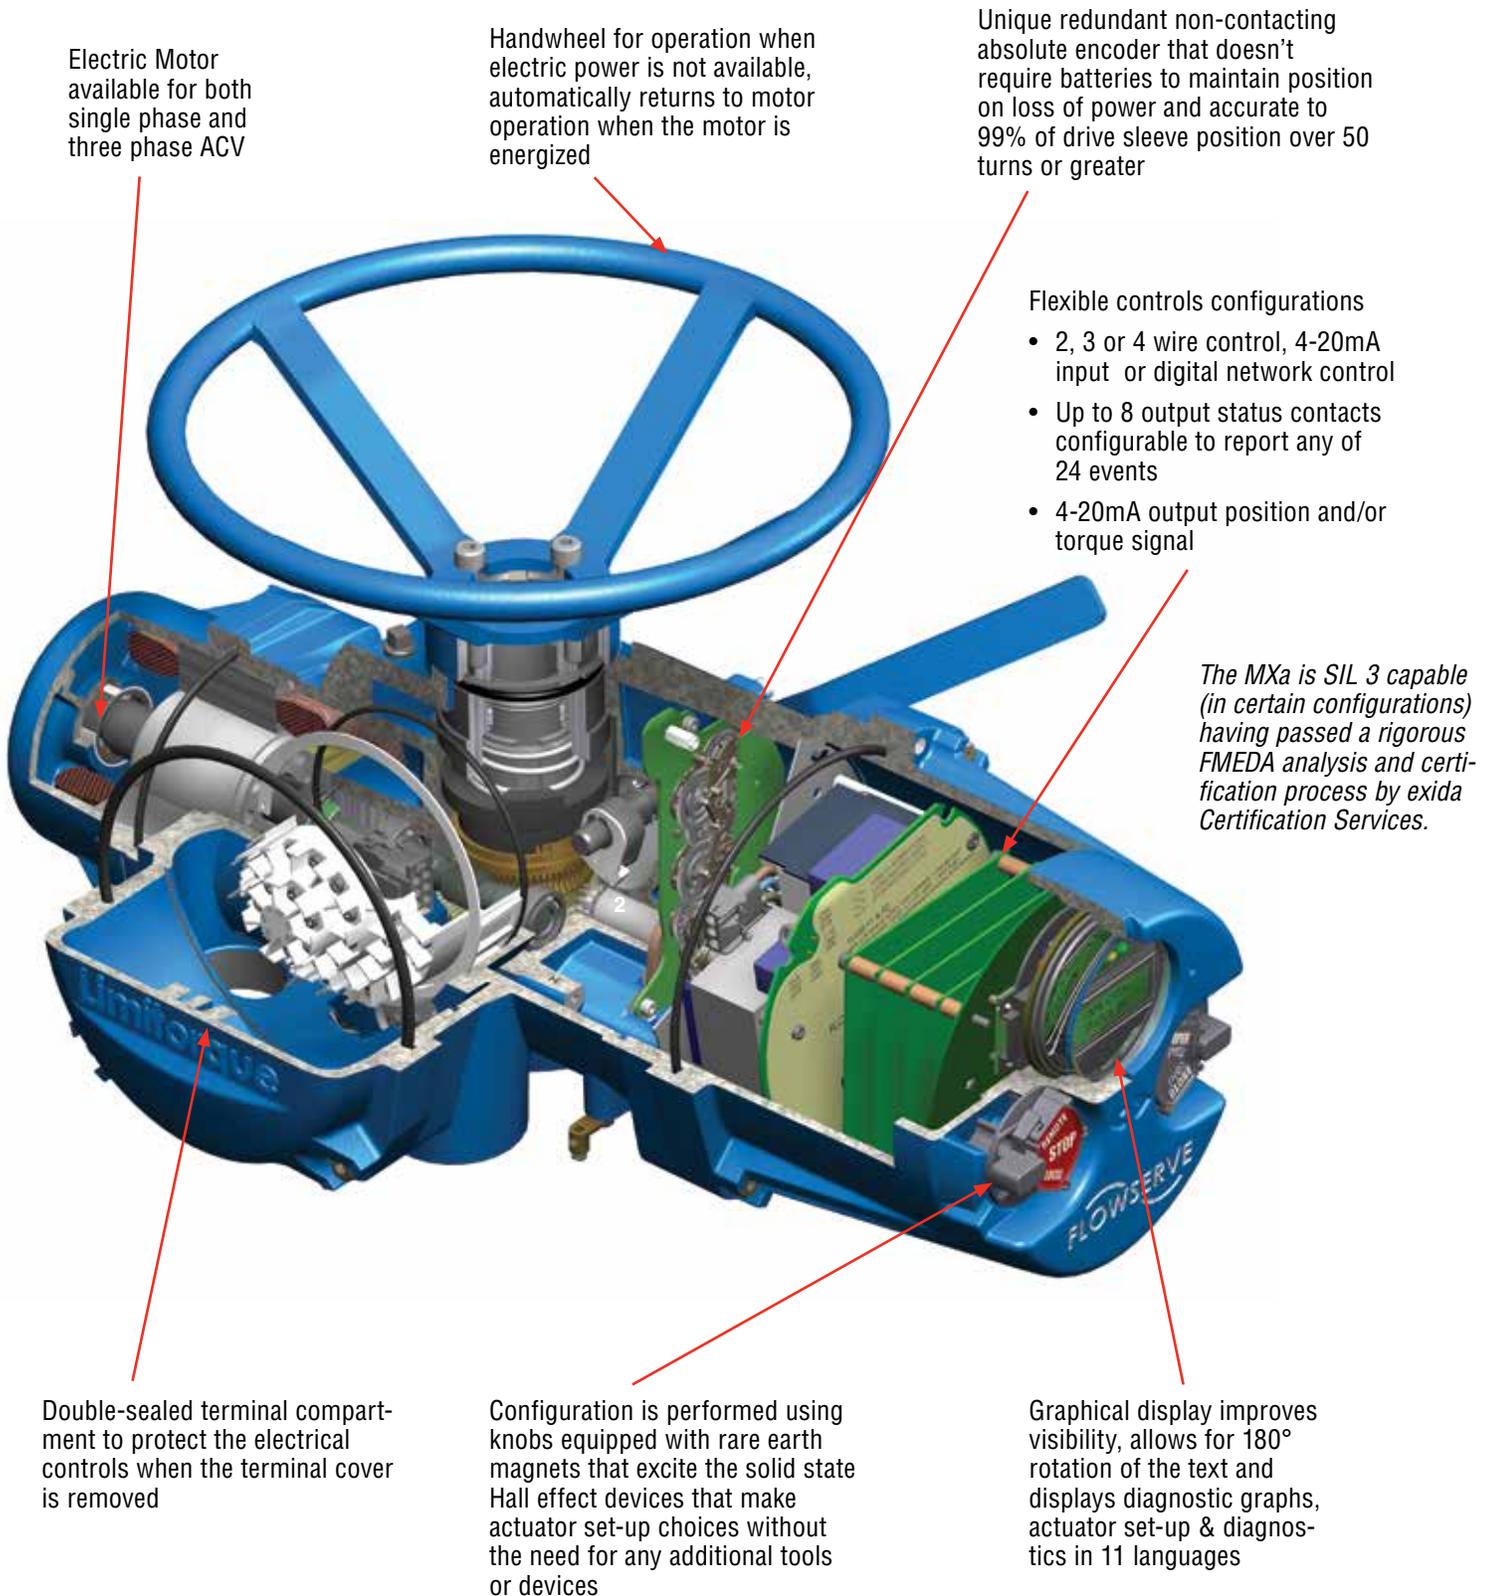

Master Station III

MX and QX units equipped with DDC can be controlled via Flowserve Limitorque's Master Station III. It includes:

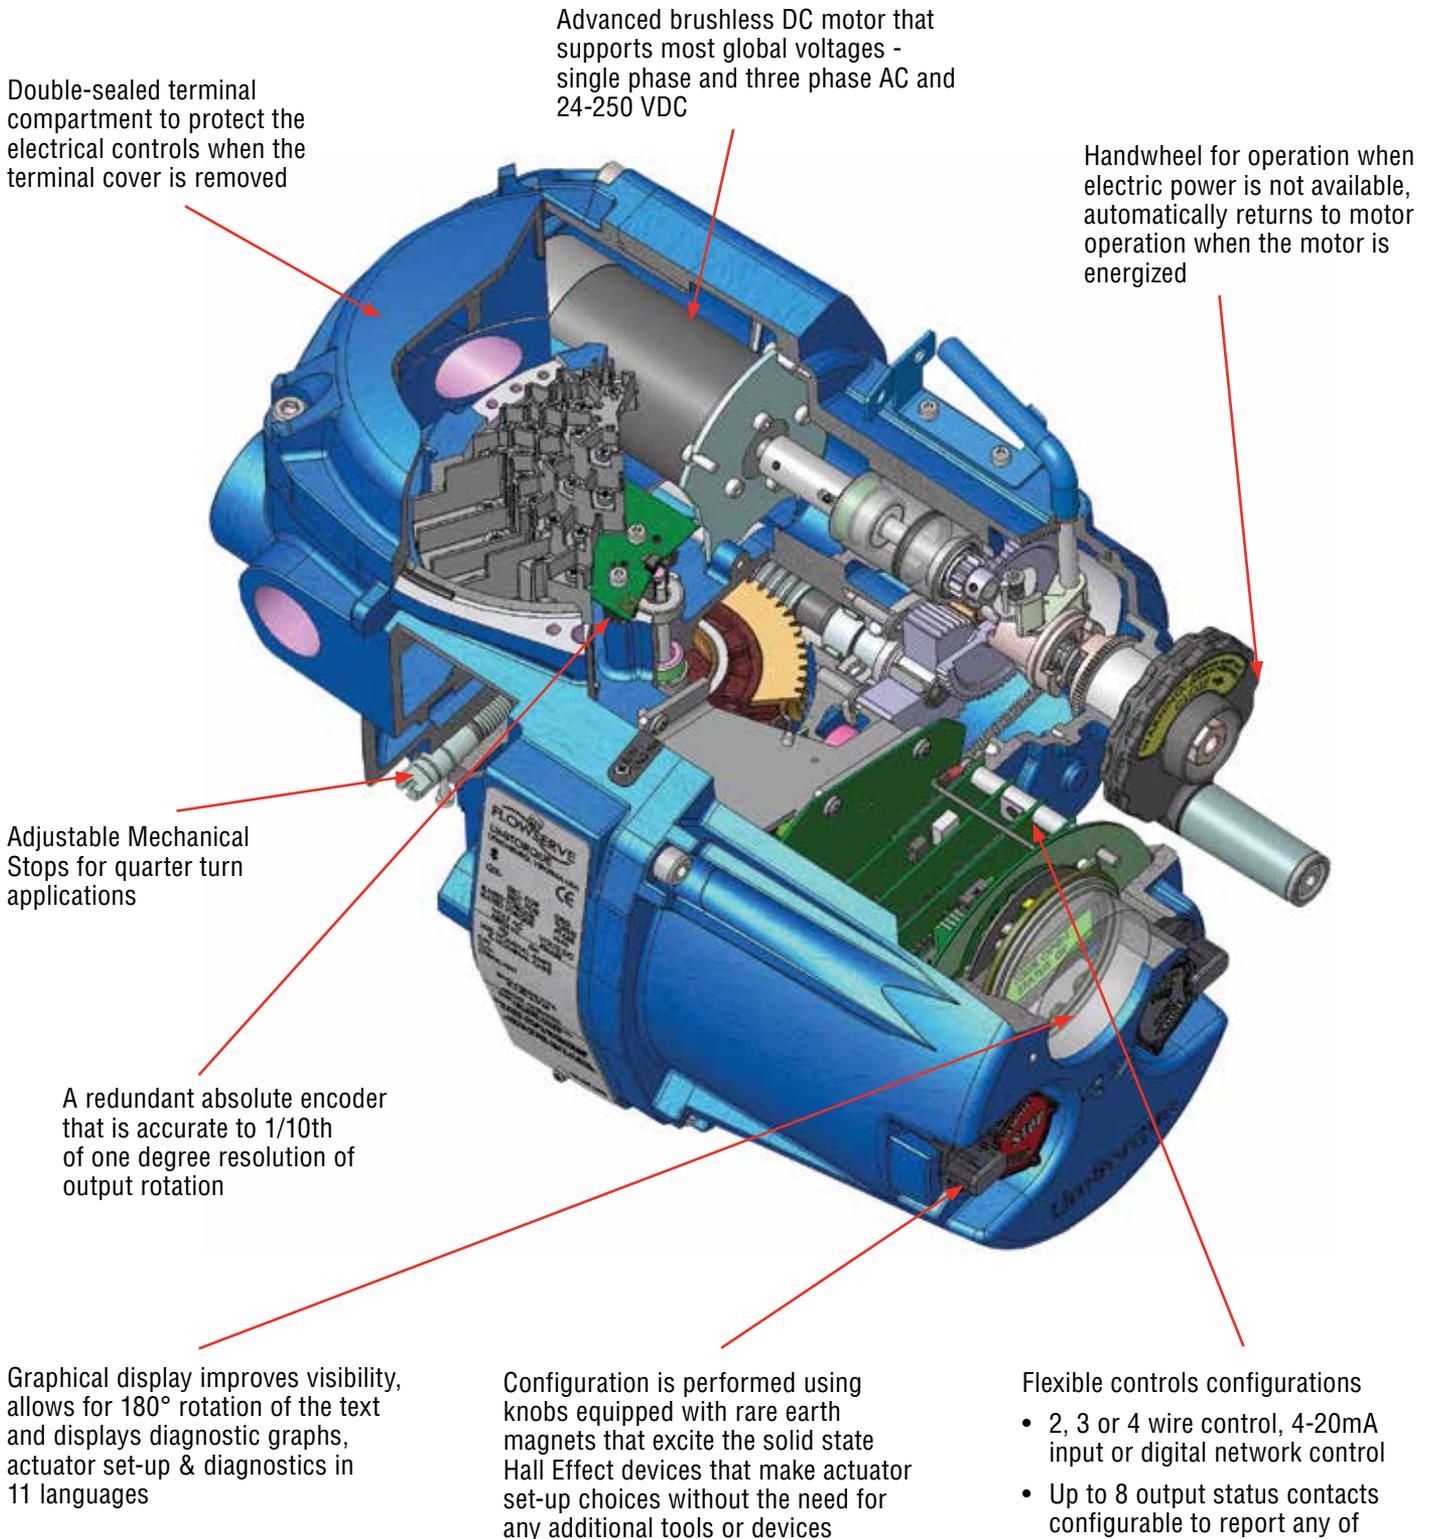

- Host interface – Industry-standard Modbus Rtu, ASCII, UDP, and TCP/IP protocols and control
- 5.6" TFT touch-screen display for network configuration status
- Configurable polling sequence priority
- Network time protocol for time synchronization of alarms/diagnostics data to host device
- Modular hot-swappable redundant design
- Email notifications of alarm conditions
- Data/event logging

** For more information, refer to the QX sales brochure, LMENBR3302.

Truly Global Designs

The QX and MX actuators have been tested to demonstrate compatibility with an extensive list of US, Canadian, EU and IEC regulations, allowing use in the harshest conditions found in applications anywhere in the world.

IEC	MILSTD
IP68	IEEE
NEMA	EN
FM	ANSI/ISA
ATEX EExd and EExde	EMC
IECEX EExd and EExde	CSA
CENELEC	ASTM
CE	

For more information on the features, options and certifications of the Limitorque MX, consult Flowserve bulletin LMENBR2302 and for the QX, consult bulletin LMENBR3302.

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can (and often does) provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Operation Maintenance (IOM) instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
